When a researcher in Psychology needed an integrated hardware-software solution for his work in animal behavioral training, he turned to LSA IT. LSA IT’s dedicated research support staff worked with him to develop an interface utilizing Arduino microcontrollers and MATLAB to meet his technological need—while at the same time enabling him to focus on what was most important: the purpose and scholarly significance of his work.

Research programming, data visualization, GIS, device integration, grant and proposal consulting, and more. Let LSA IT help you create the tech solutions you need for your work as well.
