Protect IT.

Let LSA IT guide you to safeguard your digital life.

While our devices have become an extension of our everyday lives, the need to protect and securely store everything becomes even more vital when it relates to our work! LSA offers assistance with a variety of backup services to keep all of your digital artifacts safe and secure. When English Professor, June Howard, was leaving the country, she turned to LSA IT to help secure her almost completed manuscript. We set up Crashplan to keep her book secure and back up all of her work - both personal and professional.

Specialized backup solutions to fit your needs, whether it’s research & instrumentation, a personal workstation, or a server-class machine. Let LSA IT match your needs with the appropriate solution to protect all of your work.
