Mathematics Master’s Dual Degree Program Expectations

1. The Mathematics Department expects you to complete the Mathematics Master’s Degree either before or at the same time as the degree in your home department.
2. The Dual Degree program should not take more than two academic years to complete.
3. Usually only a grade of “B” or higher in a course is allowed to be counted towards the Mathematics Master’s degree. You are expected to achieve an average of “B+” or higher for the overall GPA of the courses counted towards your Math Master’s dual degree.
4. Students must have any changes to their course plan approved by an advisor prior to taking any course(s) that are not on the original course plan.

If you anticipate not being able to meet any of these expectations, you must contact the department via email (math-grad-office@umich.edu).

Students who fail to meet the above expectations may be discontinued from the Mathematics Master’s program.

I understand and agree to these terms of the Mathematics Master’s degree.
