“The Role of Government in Social Change”

Alexandra Lisner
Class of 2017

I have always been intrigued why healthcare, which seems like a basic human right, is such a hot-button issue in American politics. Unfortunately, there are many other social issues that are often way too politicized in Washington. Through Organizational Studies, I feel I can combine my interest of politics and social justice to study effective ways to promote social change through public service. Through my courses, I plan to learn more about policy and social issues, public health, and political strategy. Because I am able to take such a broad range of classes in Organizational Studies, I will gain an interdisciplinary background on these issues through a psychological, sociological and political lens. In doing so I will be better prepared to make a strong impact in the political system and world of social change.
