BIOPSYCHOLOGY OF MOTIVATION
Psychology 433 -- Fall 2009
The University of Michigan
Professor Kent Berridge

Class: Mondays & Wednesdays at 1:00 -2:30 pm in Rm. B261 East Hall
Office: 4038 East Hall
Email: berridge@umich.edu
Phone: 763-4365
Office Hours: T 2:30-4:00 or by appointment

Readings: Readings are posted on the Ctools website

Description: This 3-credit course will focus upon topics in the affective neuroscience of motivation. Please note that the syllabus may change during the semester. The latest version is always posted on the Ctools web site. The date of a syllabus is at displayed bottom so you will know if you have the latest version.

Tentative Weekly Schedule (see Ctools for latest schedule):

<table>
<thead>
<tr>
<th>Monday</th>
<th>Wednesday</th>
</tr>
</thead>
<tbody>
<tr>
<td>September 9:</td>
<td>Introduction</td>
</tr>
<tr>
<td>September 14 &amp; 16:</td>
<td>Traditional concepts of motivation &amp; interaction with learning</td>
</tr>
<tr>
<td>September 21 &amp; 23:</td>
<td>Dr. B away 21st</td>
</tr>
<tr>
<td>September 28 – 30:</td>
<td>Limbic system</td>
</tr>
<tr>
<td>October 5 &amp; 7:</td>
<td>New Limbic systems</td>
</tr>
<tr>
<td>October 12 &amp; 14:</td>
<td>Pleasure neuroscience</td>
</tr>
<tr>
<td>October 19 &amp; 21:</td>
<td>Study Break</td>
</tr>
<tr>
<td>October 26 &amp; 28:</td>
<td>Dr B away 26th</td>
</tr>
<tr>
<td>November 2 &amp; 4:</td>
<td>Dopamine</td>
</tr>
<tr>
<td>November 9 &amp; 11:</td>
<td>Addiction</td>
</tr>
<tr>
<td>November 16 &amp; 18:</td>
<td>Hunger</td>
</tr>
<tr>
<td>November 23 &amp; 25</td>
<td>2nd Exam Nov 23</td>
</tr>
<tr>
<td>Nov 30 &amp; Dec 2:</td>
<td>Pain, fear &amp; stress</td>
</tr>
<tr>
<td>December 7 &amp; 9:</td>
<td>Sex</td>
</tr>
<tr>
<td>December 14</td>
<td>Aggression</td>
</tr>
</tbody>
</table>

In class exams are October 21 and November 23. Final exam is Friday, December 18 (4-6 pm)

8/28/2009
Grading

Your grade will be based on 3 exams, and on your depth paper, online entries and class participation. Relative weighting for grades will be:

Online comments & class discussion = 10%
Paper & class presentation = 20%
Exams = 20%, 25%, 25%

Other Student Responsibilities & Grading

Our goal in this class is to make you into an expert in affective neuroscience ☺.

Reading: We will be reading advanced papers, and lots of them, which you will want to tackle in a spirit of adventure. Reading before class (and quite probably re-reading some again after class) is essential to a successful seminar! Every student is expected to read the assigned regular articles prior to that class. In addition, you are expected to choose and read at least one extra reading for each topic prior to discussion (or two extra readings for the topics you give online comments on; and all readings for the topic you write your paper on [up to 4 extra readings]).

Depth topic: Paper & Expert panel discussion. Everyone will pick 1 depth topic for a paper (7-10 pages) and expert panel. I will pose questions to guide you for each topic. The expert panel will post a web entry to summarize its opinion (e.g., wiki: 1 – 2 pages total). The panel entry must be posted by Saturday midnight before the week of the topic so that everyone can read. Panel members will also be expected to help in class discussion of that topic. Your paper on the depth topic is due within two weeks of class discussion of the topic (or before the beginning of Finals period for topics near the end of semester).

3 Comments Online: We will have online discussions to help stimulate thought about weekly topics. Everyone must contribute 3 online comments (half-page length). One comment is expected per month. Two comments must be given before that week’s topics (entered by 3 pm Sunday prior to that week’s topic; double-length if you miss the deadline), and the remaining comment can be entered within 1 week after the topic is discussed. You are also expected to participate in discussion in class of those topics.

8/28/2009
Reading List – Psychology 433

Traditional Motivation & Learning Concepts

Regular readings:

Extra readings:

Traditional Emotion Concepts

*Does the brain have specialized emotion structures or does all the brain generate emotion?*

Regular readings:
James, W., What is an emotion, *Mind*, 9 (1884) 188-205.

Extra readings:

Old Limbic System

*What is the limbic system? Is it still a good idea?*

Regular readings:

Extra readings:

8/28/2009
New Limbic system

How should new limbic structures fit into the limbic system? (nucleus accumbens, ventral pallidum, extended amygdala, orbitofrontal cortex, ventromedial cortex [infralimbic and limbic cortex], insula cortex, etc)?

Regular readings:

Extra readings:

Expanding new limbic system?

Is nearly every brain structure part of the limbic system? Even sensory and motor structures?

Pleasure

Where does pleasure come from? What in the brain generates pleasure? What are the roles of cortex versus subcortical brain structures in pleasure? Can a pleasure ever be truly unconscious and yet exist?

Regular readings:

8/28/2009
Extra readings:

Can pleasure be unconscious?
Yes or no?

Regular readings:

Extra readings:

Electrical Brain Stimulation & Pleasure

Do reward electrodes cause pleasure? If not, what do they cause?

Regular readings:

Extra reading:

8/28/2009

**What is the role of dopamine in reward?**

**Regular readings:**

**Extra reading:**

**Addiction**

Regular readings:

Extra reading:

Pain, Fear & Stress
What in the brain causes pain? What is special about insula cortex? How do acupuncture or hypnosis control pain?

Regular readings:

Extra reading:
Hilgard: Hypnotic experience

8/28/2009

**Thirst & Salt Appetite**

**Regular reading:**

**Extra reading:**

**Hunger**

*Is hunger driven by a body weight set-point? What brain mechanisms control appetite?*

**Regular readings:**

Bolles: "Some functionalistic thoughts about regulation"

**Extra reading:**

**New hunger-reward connections**

*How does hunger alter the brain’s response to food reward stimuli? How do hypothalamic regulatory and limbic reward structures interact?*

8/28/2009
Regular readings:

Extra readings:

Sex
What brain systems generate sexual desire? Are male and female ‘styles’ of human sexuality entirely different, with different neural systems? Or are they essentially similar? What determines human sexual orientation or gender identity? How do sexual stimuli & experiences (including pheromone exposure) alter subsequent physiology or fertility?

Regular readings:

Extra readings by subtopic:
Sexual orientation & gender identity

8/28/2009

**Experiential control of sexual physiology:**

More detail on experiential controls of physiology (if you’re really interested)

**Culture & Identity:**

**Aggression**

*What are the chief brain bases of aggression? Do different types of aggression correspond to different neural systems? Can any type of pathological aggression be controlled in principle via drugs Can any type of pathological aggression be controlled by psychosurgery? In violent patients? In prisoners*

**Regular readings:**

8/28/2009

**Extra readings:**

8/28/2009
